Horses in the American West

Images of working cowhands and their horses loom large in the mind's eye of many who love the American West. Those same images form the heart and soul of this lavishly illustrated book, which captures the viewpoints, values, and observations of twenty-four respected contemporary artists. The artists' own words illuminate the painting, sculpture, photography, and drawings of these award-winning, supremely creative individuals, allowing readers a glimpse into their creative processes. As Heidi Brady and Scott White demonstrate, these Western artists came to their work in a wide variety of ways. Some are studio-trained and learned to portray horses through formal classes; others simply began creating art on their own, learning through visual and tactile study of the horses they worked with each day. The two dozen artists profiled here include ranch owners, working hands, professional photographers, rodeo cowboys, art instructors, graphic designers, a saddle maker, and a former predator hunter. Readers will delight in these remarkable paintings, drawings, photographs, and sculptures depicting the freedom and spirit of the American West.

The question of how falling cats land on their feet has long intrigued humans. In this playful and eye-opening history, physicist and cat parent Gregory Gbur explores how attempts to understand the cat-righting reflex have provided crucial insights into puzzles in mathematics, geophysics, neuroscience, and human space exploration. The result is an engaging tumble through physics, physiology, photography, and robotics to uncover, through scientific debate, the secret of the acrobatic performance known as cat-turning, the cat flip, and the cat twist. You’ll learn the solution—but also discover that the finer details still inspire heated arguments. As with other cat behavior, the more we investigate, the more surprises we discover. “[An] extremely well-written popular science book.” —James Kakalios, author of The Physics of Superheroes “Engrossing.” —Sean Carroll, author of Something Deeply Hidden: Quantum Worlds and the Emergence of Spacetime
